Taha Mian

taha.m.mian@gmail.com · tahamian.github.io · github.com/tahamian · linkedin.com/in/taha-mian

Skills

Languages: Python, TypeScript/JavaScript, Go, C/C++, Java, Bash, SQL
Frameworks: React, Node.js, GraphQL, Flask, Vue.js, D3.js
Infrastructure: AWS, GCP, Docker, Kubernetes, Terraform, Ansible, CI/CD, Linux, MQTT
Databases: PostgreSQL, MongoDB, SQLite, Redis

Work Experience

Senior Software Engineer, *Mainspring Energy* Oct 2023 – Present

- Hardened the C++ telemetry service and in-house 5 kHz time-series database against disk corruption from ungraceful shutdowns, eliminating data-loss incidents and support tickets.
- Converted proprietary telemetry into Parquet datasets in BigQuery for fleet-wide analysis.
- Built a real-time fleet-management app (React, GraphQL, MQTT, GCP) used by internal teams and service techs for on-site repairs.
- Designed a centralized role-based access control (RBAC) system with OpenFGA, unifying authorization across multiple cloud apps and replacing ad-hoc permission checks.
- Built the over-the-air update system deploying software to on-site servers, main controllers, and peripheral controllers across the fleet.

Software Engineer III, *Lever* Mar 2022 – Oct 2023

- Automated candidate-pipeline customization, reducing related support tickets by **95%**.
- Built a self-service compliance framework for per-region data rules, enabling GDPR/CCPA compliance with no ongoing engineering effort.
- Overhauled job-posting integrations (LinkedIn, Indeed, internal APIs), improving accessibility and recruitment efficiency.

Software Engineer, *Evertz Microsystems* May 2019 – Feb 2022

- Automated VM provisioning and orchestration across VMware and AWS, reducing deployment time from **6 months** to **2 weeks**.
- Built content and metadata services for Evertz's first SaaS product (Evertz.io) on AWS Lambda.
- Built a full-stack deployment app (React, GraphQL, Flask) to ship Evertz's distributed system into customer clouds, provisioning infrastructure with Terraform and Ansible.

Software Engineer (Co-op), *Loblaw Companies Limited* May 2017 – Apr 2018

- Built a dashboard (D3.js, Vue.js, Express) to model batch processes at PC Bank.
- Automated documentation and reporting of production issues with a database-driven app, eliminating manual report preparation.

Projects

Autograder

Go TypeScript Python

- Designed and built a full-stack autograding platform (Go, TypeScript, Python) used by **140+** first-year McMaster Engineering students.
- Sandboxed submissions in Docker containers with no network access and strict resource limits for safe, isolated execution.

Education

McMaster University, *Software Engineering (Co-op)*, BEng Sep 2014 – May 2019
